

Maxime Lafrance

Software Engineer

@ maxlafrance97@gmail.com <https://mlafrance.dev> <https://github.com/mdLafrance>

SUMMARY

Adaptable, personable, and creative software engineer with a background in mathematics. Consistently brings value to teams by leveraging years of experience gained from working directly with stakeholders and end users to guide product development. Excels at self-directed work and self-management, with a proven track record of success in fast-paced environments. Always eager to learn from fellow team members, and to collaborate to create great software.

EXPERIENCE

Software Engineer

BeloFX

04/2022 - Present Montreal, QC

- Led the development of the studio's data validation software to process and sanitize vendor deliveries, collaborating closely with department heads and team leads. Developed a Python library and provided ongoing support and training for the international DataOps team, while consulting on and contributing to vendor spec documentation.
- Built a React web application allowing our teams to seamlessly browse our distributed file systems, backups, and archives. This app integrates with Elasticsearch to serve results in real-time, and uses Express with TRPC to serve backend requests.
- Developed Python libraries and command line tools for users to ergonomically interface with our backend systems and production tracking software.
- Prototyped GCP Cloud Run deployments with Terraform to lower TCO, improve developer velocity, and optimize workload fit for cloud-native solutions.
- Acted as an internal technical consultant for identifying requirements with new clients, interpreting spec documents, and collaborating with team leads to implement bespoke solutions.
- Implemented and maintained GitLab CI/CD pipelines, automating linting, testing, builds, and deployments for Python packages, and designed a PoC pipeline for TypeScript packages.
- Acted as a first point of contact to triage support requirements, quickly jumping in to fix critical system bugs and communicating with users to identify issues.

Software Engineering Intern

Industrial Brothers

06/2018 - 08/2019 Toronto, ON

- Built a desktop PyQt application to streamline video material browsing and downloads for production staff, significantly reducing review preparation time. The app leveraged multiprocessing for high performance and responsiveness.
- Engineered a new asset validation system, with a PyQt GUI, and python library which utilized decorators to mark and organize validation functions. This new system could in some cases reduce the time needed to validate an asset by 90%.
- Developed plugins for Autodesk Maya integrating Qt and third-party APIs to enhance functionality and meet artist-specific needs.
- Spearheaded an R&D proposal to overhaul the studio's asset organization system, including a desktop PyQt app for scene composition, and native Autodesk Maya integrations for seamless asset import/export.

Software Engineering Intern

Awesometown Entertainment

06/2017 - 08/2017 Toronto, ON

- Created a PyQT extension plugin for Autodesk Maya, to dynamically load and graphically serve other in-house and third party plugins. This shelf tool was designed for ergonomic use, served tools for multiple departments, and was used constantly and daily by artist staff.
- Maintained our MySQL database, and in-house wrapper library. Updating data stored like configuration for multiple client projects, user data, and even QML UI markup.
- Updated and maintained our in-house code testing software and suite, used to audit the integrity of our in-house tools before deployments to the studio floor.

SKILLS

Python	Typescript	React	Bash	Git	CI/CD	HTML	CSS	Terraform	GCP	Docker
Express	Tailwind	Emotion CSS	TRPC	AWS	Vite	C++	Rust	Vitest	CMake	PyQt

EDUCATION

Bachelor's of Computing and Mathematics

Queen's University
