SUMMARY

Adaptable, personable, and creative software engineer with a background in mathematics. Consistently brings value to teams by leveraging years of experience gained from working directly with stakeholders and end users to guide product development. Excels at self-directed work and self-management, with a proven track record of success in fast-paced environments. Always eager to learn from fellow team members, and to collaborate to create great software.

EXPERIENCE

Software Engineer

BeloFX

📅 08/2024 - Present 📍 Montreal, QC

- Developed a React web application allowing our teams to seamlessly browse our distributed file systems, backups, and archives. This app integrates with Elasticsearch to serve results in real-time, and includes an Express and TRPC sidecar API to serve requests to the cluster.
- Established and maintained CI/CD pipelines to automate linting, testing, documentation generation, and deployments of Python and Typescript packages, resulting in lower TCO and maximizing team velocity.
- Served as internal technical consultant for client-facing projects, collaborating with department managers to analyze requirements and implement custom solutions.
- Acted as a primary point of contact when triaging support tickets and feature requests.

Junior Software Engineer

BeloFX

📅 04/2022 - 07/2024 📍 Montreal, QC

- Designer and product owner of a data validation and integration system used daily by our international data ops team to ingest data from vendors. This system processes dozens of deliveries per day, and Terabytes of data every month. Includes a Python configuration and data processing library, a Typer CLI, and a QT desktop GUI.
- Created and shipped Python and Bash command line tools for users to ergonomically interface with our backend systems and production tracking software.

Developer Intern

Industrial Brothers

📅 06/2018 - 08/2019 📍 Toronto, ON

- Created a desktop PyQt application for production staff to view and download media from our production tracking software, Shotgrid. This application leveraged multiprocessing to seamlessly handle dozens of concurrent downloads, and could save users upwards of five minutes every time they needed to assemble media for reviews.
- Redesigned the asset "preflight" tool used by artists to verify asset quality before check-in. This included a PyQt Maya GUI, as well as a Python library utilizing a decorator system to mark and dynamically load validator functions. This new system could in some cases reduce the time needed to validate an asset by 90%.

Developer Intern

Awesometown Entertainment

📅 06/2017 - 08/2017 📍 Toronto, ON

- Created an extensible and modifiable PyQt tool shelf plugin for Autodesk Maya, which provided access to a variety of in-house and third party tools, used daily by artist staff.
- Updated and maintained in-house MySQL wrapper libraries.
- Audited studio code quality using in-house testing software, and added updates to this software to increase ease of use and reliability.

SKILLS

Python	Typescript	Bash	Git	Github Actions	Gitlab CI	CSS	Tailwind	Express	Docker
NextJS	Emotion CSS	TRPC	AWS	Terraform	Vite	C++	Rust	Vitest	

EDUCATION

Bachelor's of Computing and Mathematics

Queen's University
